

Standard time is measured by atomic clocks, providing a technical basis for global transactions independent of the environment in which we live. Rivers offer an alternative. Monitoring their natural flow makes us more attentive to ground conditions. Spanning deep time and changing with the seasons, they're a meaningful source of ecological wisdom – today and tomorrow.

Alaska River Time...

...engages a network of glacial and spring rivers to regulate a new kind of clock, which speeds up and slows down with the waters. The clock can be used to recalibrate all aspects of life from work schedules to personal relationships.

River Time...

... is applicable locally and globally, a new standard of ground truth that will be increasingly relevant as we reinforce and reimagine our relationships with the natural world.

River Time...

...is a creative work by Jonathon Keats. Keats is an experimental philosopher, artist and writer. He creates conceptually driven interdisciplinary art projects that pose questions about the Universe.

Alaska River Time...

...is a project of the Anchorage Museum and its SEED Lab. It is part of a series of public artworks that examine future + climate and connections to the natural world through art and design.
